Challenges and highlights of the assessment

o The following challenges occurred during this assessment:

- Since I had not previously worked with Wordpress or WPfunnel, I spent several hours familiarizing myself with their workflows before beginning the assessment.

- While working on the WPfunnel plugin, I encountered an issue when I enabled the auto-update feature, which resulted in the loss of my source code. Subsequently, I developed a custom plugin for the assessment. Despite my very limited expertise in Wordpress, this approach made my implementation of source code both easier to understand and maintain.

o Regarding the issue of failing to send emails and delete customer lists, I suggest implementing batch processing at intervals in addition to the existing functions, which could be a valuable enhancement.
